

Technology planning with a twist!

Advanced technology integration plans in SL
classes!

Hands on Full Day Workshop

6 hour workshop

Ever wondered how those really technologically inclined teachers plan for fantastic ideas based on the use of computers and technology for their SL classes? Come to this session and find out how entire unit plans can be carried out with no other resource than your SL program of studies and a couple of technology tools (OK...maybe more than two!).

DURING THIS WORKSHOP YOU WILL:

- **identify** key technology-based environments that can be fully integrated in your SL classes (mainly based on free software and tools available on the Internet)
- **experiment** with at least 3 different main technology-based tools and learn their basic functions, while creating simple resources for your lessons
- **explore** 3 different unit plans that integrate technology uses and directly relate to outcomes in your programs of studies
- **leave the session** with the materials, tools and links to all information covered to modify and use in your next week's classes

Participants will receive soft-copies of the workshop material, as well as handouts. The workshop will be conducted in a computer lab for individual access to stations and time to practice and review activities will be given during the session.

Correlations in lesson plans available to: 9-y and 3-y language and culture POS

(examples in Spanish, Italian and French...but ideas work for all languages!)
